Origin of life: the chirality problem by Jonathan Sarfati
First published in 1998; updated in 2010
Many important molecules required for life exist in two forms. These two forms are non-superimposable mirror images of each other, i.e.: they are relat

[Chirality and Stereoisomers - Chemistry LibreTexts](#)
The concepts of stereoisomerism and chirality command great deal of importance in modern organic chemistry, as these ideas helps to understand the physical and theoretical reasons behind the formation and structures of numerous organic molecules, the main reason behind the energy embedded in these essential chemicals.

[Chirality \(chemistry\) - Wikipedia](#)

Chirality /k a r l i t i / is a geometric property of some molecules and ions. A chiral molecule/ion is non-superposable on its mirror image. The presence of an asymmetric carbon center is one of several structural features that induce chirality in organic and inorganic molecules.

[Chirality and life | SpringerLink](#)

The crucial role of homochirality and chiral homogeneity in the self-replication of contemporary biopolymers is emphasized, and the experimentally demonstrated advantages of these chirality attributes in simpler polymeric systems are summarized. The implausibility of life without chirality and hence

[Chirality and Life - ResearchGate](#)

Chirality is one kind of fantastic phenomenon in the nature and plays important roles in life [1, 2], pharmacology [3,4], and optical techniques [5].

[Chirality and Life | SpringerLink](#)

Chirality, meaning handedness, pervades much of modern science, from the physics of elementary particles to the chemistry of life. The amino acids and sugars from which the central molecules of life proteins and nucleic acids are constructed exhibit homochirality, which is expected to be a key

[Chirality of life: Another false positive? - The Panda's Thumb](#)

Creationists have considered the mystery of the chirality of life a problem inaccessible to scientific explanation. Of course, science as usual takes little notice of claims to ignorance and has provided yet another explanation for the chirality of life.

Enantiomers. One type of stereoisomerism is that of

molecules that are chiral. A chiral molecule is non-superimposable on its mirror image, so that the mirror image is a different molecule.

The shadow of symmetry haunts physics. Symmetry is invoked to understand nature concisely, but broken symmetry is invoked to understand nature completely. Physics is filled with examples of shattered symmetries; there is more
