This paper deals with obtaining (necessary and) sufficient conditions for Psi-asymptotic stability of the first order linear and nonlinear matrix difference equations on \mathbb{N} , using technique of

Boundedness and stability of solutions to difference equations

This paper is concerned with the qualitative behaviour of solutions to difference equations. We focus on boundedness and stability of solutions and we present a unified theory that applies both to autonomous and nonautonomous equations and to nonlinear equations as well as linear equations.

On the global stability of one nonlinear difference equation

Abstract. We establish exact sufficient conditions for the global stability of the trivial solution of the difference equation $x_{n+1} = x_n + f_n(x_n, x_{n-k})$, where the nonlinear functions f_n satisfy negative feedback conditions and have sublinear growth.
