[What is the difference between a Scanning Electron ...](#)

The most important differences between a transmission electron microscope and a scanning electron microscope are: Rather than the broad static beam used in TEM, the SEM beam is focused to a fine point and scans line by line over the sample surface in a rectangular raster pattern.

[Wikipedia](#)

A scanning transmission electron microscope (STEM) is a type of transmission electron microscope (TEM).

Pronunciation is or. As with a conventional transmission electron microscope (CTEM), images are formed by electrons passing through a sufficiently thin specimen.
